

## **Cementation Opens Rouyn-Noranda Office**

November 26, 2013

**NORTH BAY** – Cementation has opened an office in Rouyn-Noranda to further serve Clients in the Quebec mining industry.

“We are excited to be establishing a presence in Quebec. Many of us have been involved in a wide range of projects in Quebec over the years. We feel that Cementation’s focus on safety, our design build service offering, and our best for project approach will all add value to the market,” said Cementation Canada Inc. General Manager – Quebec & South America, Denis Blais.

Cementation is an established underground mine contracting and engineering company with core engineering capacity in addition to experienced operations and technical expertise. Committed to working safely, Cementation offers design-build solutions for mine access projects worldwide. For a number of years, Cementation’s multi-discipline engineering team has been carrying out underground mine access pre-feasibility and feasibility studies for Clients in the Quebec region. Establishing an office in Rouyn-Noranda will allow the company to expand service delivery and better meet the specific mining needs of this unique region.

In addition to design-build options, Cementation also provides traditional mine contracting services including shaft sinking, ramp and lateral development, raise boring, underground construction, mechanized raising, mining and borehole hoisting.
